

BLACKSATINO HYGIENE PAPER

BLACKSATINO HYGIENE PAPER

By implementing unique circular concepts, we obtain secondary raw materials and use them to produce BlackSatino hygiene paper.

The cycles include paper waste streams from companies and organisations; these raw materials are stored centrally at one of our partners and then transferred to one of our mills.

BlackSatino hygiene paper is harmless to humans and the environment and is produced with 100% green electricity. We neutralise all unavoidable production-related emissions. This contributes to our ambitious climate goals to reduce CO₂ and thus lays the foundation for a more sustainable future. The requirements for the respective production processes and related sustainability aspects are equally high for all our products.

The raw materials for the BlackSatino paper lines differ in their composition; therefore, we offer three paper lines.

▷▷▷ BLACKSATINO ORIGINAL, BLEND and GREENGROW: WHAT ARE THE DIFFERENCES?

ORIGINAL

- ▷ BlackSatino Original is sustainably produced recycled paper based on office paper or archive paper
- ▷ 100% recycled
- ▷ High white paper quality

BLEND

- ▷ For BlackSatino Blend, cardboard coffee cups and used paper towels are processed in a mix with alternative raw materials, e.g. drink cartons, labels and bottle labels
- ▷ 100% recycled
- ▷ Natural colour - The colour may vary slightly depending on the raw materials used

GREENGROW

- ▷ Cellulose fibre from Miscanthus in combination with various used paper streams
- The Miscanthus fibre is applied unbleached
- ▷ Fresh fibre/recycled mix
- ▷ A natural, light beige colour
